

# HomeZone Perimeter Guard

Around your home's perimeter, we work to prevent pests from entering by creating an effective boundary that controls pests and keeps them away.

## Our program includes:

- Identifying pests or their signs
- Searching for possible entry points and recommending physical barriers
- Determining the most effective treatments; these could include liquid sprays granular products, baits, dusts and other methods
- Using effective, long-lasting treatments
- Conducting ongoing evaluation and re treating when necessary

Our initial service consists of a thorough inside service and a 20 foot perimeter barrier around the exterior of your home. We also focus on the all the entry points found on the exterior such as windows, doors, and eaves. Also, your technician will sweep your eaves, removing any unsightly spider webs or debris. After your initial service, our office staff will call you approximately three months later to notify you of the date and time that we are going to provide your outside service. At this time, or any time between your quarterly services, you can have the inside of your home serviced at no additional charge. The inside of your home will only be serviced if you notify us. The quarterly pest service MUST be kept on schedule to receive reservices at no charge. This is the perfect service for the busy, on the go family, because we can take care of your problems at YOUR convenience.

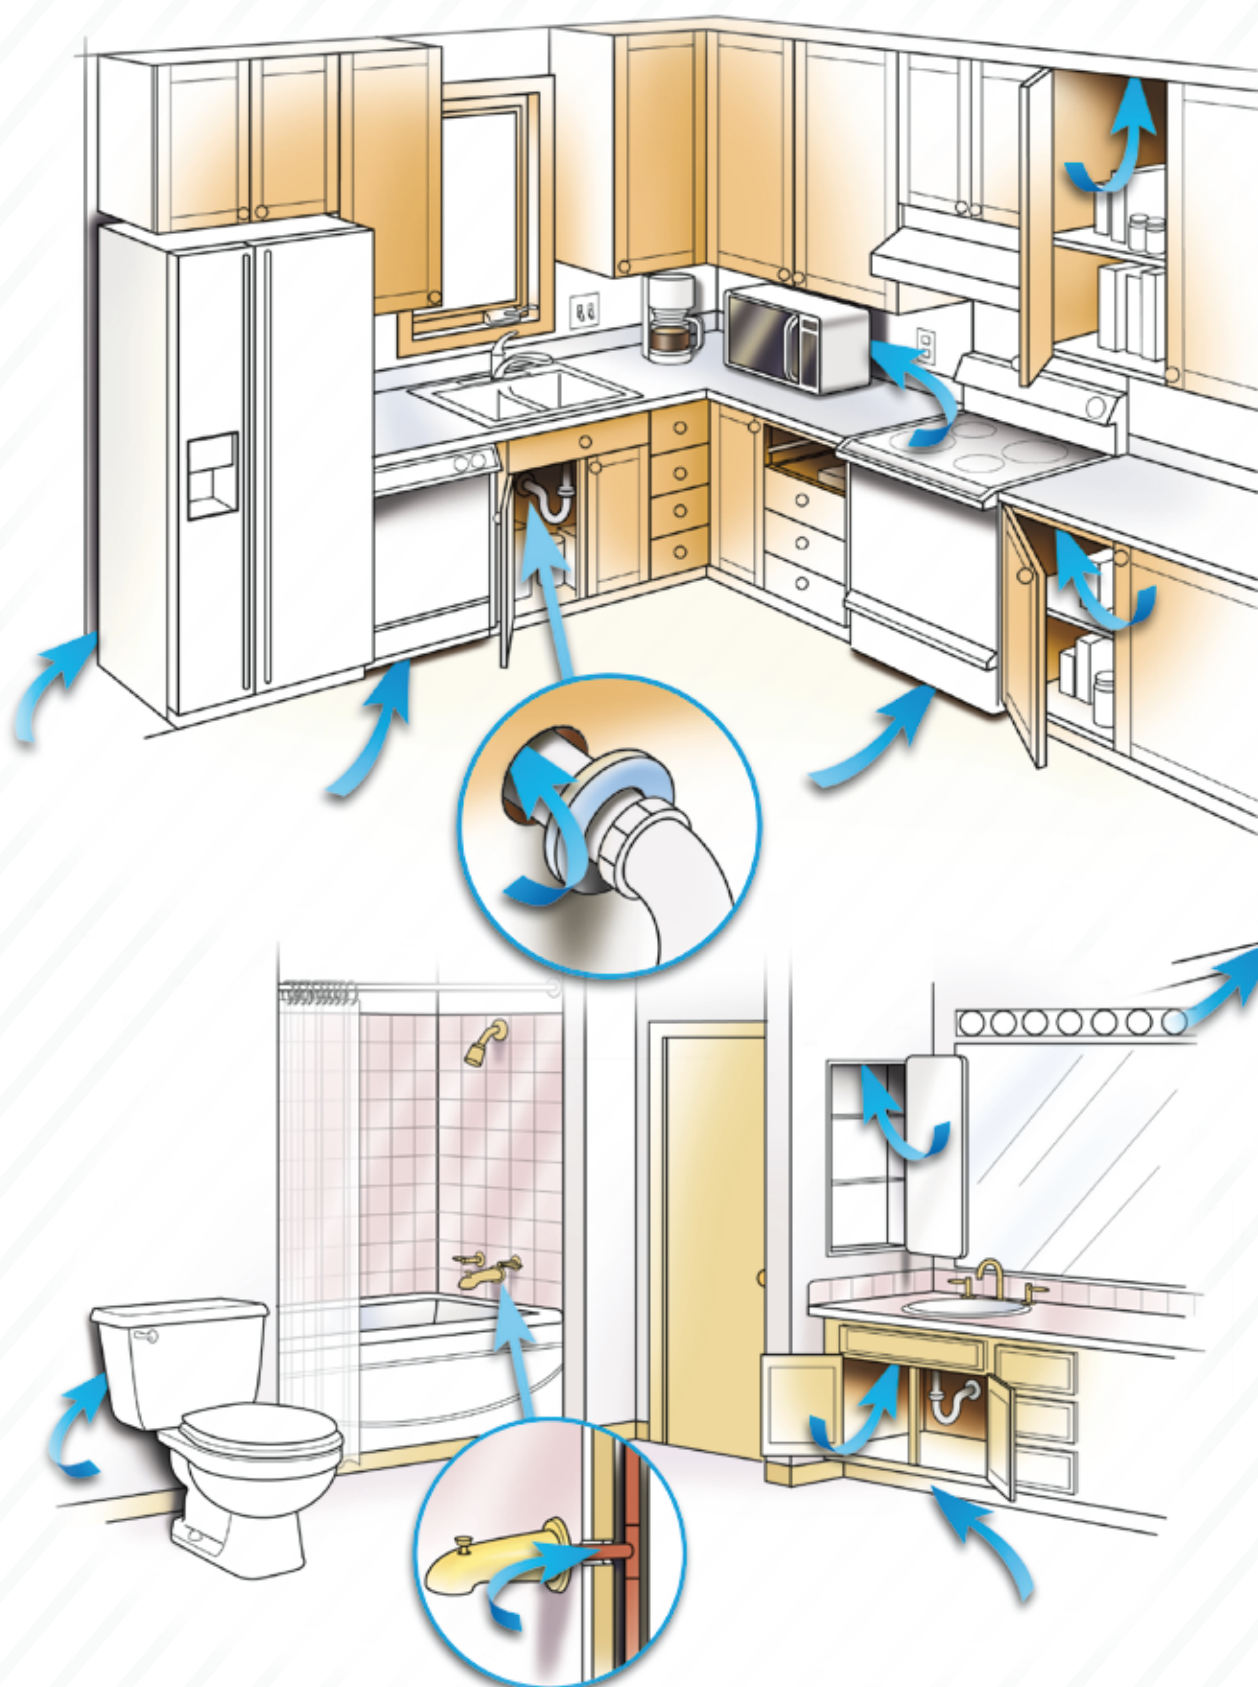

# HomeZone Enhanced

## Inside your home

We target pests by treating in places where pests hide, but away from your family and pets. The difference in this service and our Perimeter Guard service is that we ALWAYS will treat inside your home. The outside of the home is treated as well, but the size of the perimeter barrier is much smaller. This service is great for those homes with higher pest pressure or for those customers who want the piece of mind of their technician always servicing the inside of their home. This service will always need to be scheduled by our office.

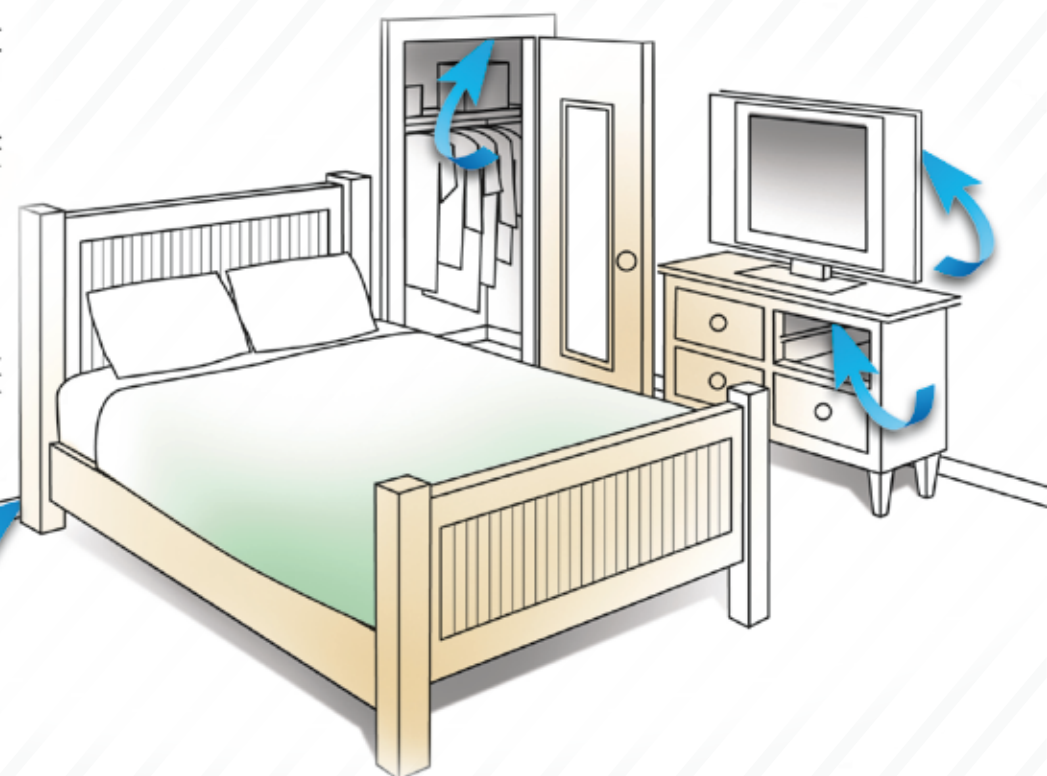

## Kitchens and food preparation areas

Food sources and moisture can draw pests into your home.

## Sleeping areas

Quiet, undisturbed spaces may harbor pests you have not noticed.

## Bathrooms

The warm, moist environment in bathrooms offers ideal conditions for pests.
